SENIOR BACKEND ENGINEER AT GET YOUR GUIDE - RECOMMENDATIONS

Summary

As a software engineer my goal is to create and maintain data products at scale that improves the world with high quality and timely delivery. To have a nice time sharing and learning while working with amazing people. I care about humanism and science. Programmer, teacher.

Main skills

Software Architecture

To build systems with the balance between design and pragmatism that allows reasonable delivery dates with long-term sustainability.

Team Leader

Teams are bigger than individuals. I conscientiously look for ways to empower, support and inspire people around me.

Speaker & Community organizer

I am passionate about technology and serve as an advocate by doing talks and organizing events.

Experience

GetYourGuide - Senior Backend Engineer

2018 - Present

Happy to be part of GYG and solve the travelers problems at a different scale. Working with Python, Java, Scala and PHP to split the monolith in multiple services. Defining and leading the implementation of the technology vision of our data-product in the recommendations team. Up-leveling the product with personalized recommendations and virtual products all proved by AB tests. Working with online and offline models with heavy amounts of data using spark.

CompuFácil - From Backend Engineer to CTO

2014 - 2017

Modeling api's, creating all the product architecture, leading, hiring, firing.
