SENIOR BACKEND ENGINEER AT GET YOUR GUIDE - RECOMMENDATIONS AND RELEVANCE

Summary

My goal is to create and maintain data products at scale that improves the world with high quality and timely delivery. To have a nice time sharing and learning while working with amazing people. I care about humanism and science.

Main skills

Software & Data Architecture

To build systems with the balance between design and pragmatism that allows reasonable delivery dates with long-term sustainability.

Team Leader

Teams are bigger than individuals. I conscientiously look for ways to empower, support and inspire people around me.

Speaker & Community organizer

I am passionate about technology and serve as an advocate by doing talks and organizing events.

Experience

GetYourGuide - Senior Backend Engineer

2018 - Present

Happy to be part of GYG and solve the travelers problems at a different scale. Defining our recommendations architecture, service, data-stores, events, pipelines. Implementing and maintaining our production recommendations service in Python. Improving the CI/CD of our data pipelines services in Python and Scala. Working to personalize our recommendations and ranking.

CompuFácil - From Senior to Principal Engineer

2014 - 2017
